## Snapshot Report

ICES 2004-454XD8

The National Assessment of Educational Progress (NAEP) assesses mathematics on a 0-500 point scale. In 2003, San Diego City Unified was one of nine urban districts that voluntarily participated in the NAEP mathematics assessment on a trial basis.

#### **Overall Mathematics Results for San Diego**

- In 2003, the average scale score for eighth-grade students in San Diego was 264. This was lower¹ than that of the nation's public schools (276).
- San Diego's average score (264) in 2003 was not significantly different from that of public schools in large central cities<sup>2</sup> (262), and not significantly different from that of California (267).
- The percentage of students in San Diego who performed at or above the NAEP *Proficient* level was 18 percent in 2003. The percentage of students in San Diego who performed at or above the *Basic* level was 53 percent.

NOTE: The NAEP mathematics scale ranges from 0 to 500, with the achievement levels corresponding to the following points: Below *Basic*, 261 or lower; *Basic*, 262-298; *Proficient*, 299-332; *Advanced*, 333 or above.

Performance of NAEP Reporting Groups in San Diego								
	Percentage	Average	Percentage of students at					
Reporting groups	of students <sup>3</sup>	Score	Below Basic	Basic	Proficient	Advanced		
Male	49	267 ↓	45 ↑	35	18 ↓	2 ↓		
Female	51	262 ↓	50 ↑	35 ↓	14 ↓	2 ↓		
White	27 ↓	284	24	40	30	5		
Black	16	252	61	32	6	#		
Hispanic	38 ↑	248 ↓	66 ↑	28 ↓	6 ↓	#		
Asian/Pacific Islander	19 🕇	278 ↓	31 🕇	41	25	3 ↓		
American Indian/Alaska Native	#↓							
Free/reduced-price school lunch								
Eligible	52 ↑	252 ↓	61 🕇	30 ↓	8	#		
Not eligible	44 ↓	278 ↓	31 🕇	40	25 ↓	4 ↓		

### Average Score Gaps Between Selected Groups

- In 2003, male students in San Diego had an average score that was higher than that of female students (5 points). This performance gap was not significantly different from that of the Nation (2 points).
- In 2003, White students had an average score that was higher than that of Black students (33 points). This performance gap was not significantly different from that of the Nation (35 points)
- In 2003, White students had an average score that was higher than that of Hispanic students (36 points). This performance gap was wider than that of the Nation (28 points).
- In 2003, students who were not eligible for free/reduced-price school lunch had an average score that was higher than that of students who were eligible (26 points). This performance gap was not significantly different from that of the Nation (28 points).

### **Mathematics Scale Scores at Selected Percentiles**

# Scale Score Distribution

	25 <sup>th</sup>	50 <sup>τη</sup>	75 <sup>th</sup>
	Percentile	Percentile	Percentile
San Diego	239 ↓	265↓	290 ↓
Large central city (Public)	238 ↓	262↓	288↓
Nation (Public)	253	278	301

An examination of scores at different percentiles on the 0–500 NAEP mathematics scale at each grade indicates how well students at lower, middle, and higher levels of the distribution performed. For example, the data above show that 75 percent of students in public schools nationally scored below 301, and 75 percent of students in San Diego scored below 290.

- --- Reporting standards not met; sample size insufficient to permit a reliable estimate.
- \* Significantly different from San Diego.
- ↑ Significantly higher than, ↓ lower than appropriate subgroup in the nation (public).
- ¹ Comparisons (higher/lower/not different) are based on statistical tests. The .05 level was used for testing statistical significance. Performance comparisons may be affected by differences in exclusion rates for students with disabilities and limited-English-proficient students in the NAEP samples and changes in sample sizes. NAEP sample sizes have increased in 2003 compared to previous years, resulting in smaller detectable differences than in previous assessments.
- 2"Large central city" includes nationally representative public schools located in large central cities within metropolitan statistical areas as defined by the federal Office of Management and Budget. It is not synonymous with "inner city."
- <sup>3</sup> For comparison, minority students comprised 76 percent of students in large central city public schools and 38 percent in public schools nationally. Also, students eligible for free/reduced-price school lunch comprised 60 percent of students in large central city public schools and 36 percent in public schools nationally.

NOTE: Detail may not sum to totals because of rounding, and because the "Information not available" category for Free/reduced-price lunch is not displayed. Statistical comparisons are calculated on the basis of unrounded scale scores or percentages.
